2. Tampilkan halaman info dari perintah date:

```
root@ubuntuyuko-VirtualBox: /etc

21.1 'date': Print or set system date and time
=====

Synopses:

    date [OPTION]... [+FORMAT]
    date [-u|--utc|--universal] [ MMDDhhmm[[CC]YY][.ss] ]

    Invoking 'date' with no FORMAT argument is equivalent to invoking it
    with a default format that depends on the 'LC_TIME' locale category. In
    the default C locale, this format is '+%a %b %e %H:%M:%S %Z %Y', so
    the output looks like 'Thu Mar 3 13:47:51 PST 2005'.

    Normally, 'date' uses the time zone rules indicated by the 'TZ'
    environment variable, or the system default rules if 'TZ' is not set.
    *Note Specifying the Time Zone with 'TZ': (libc)TZ Variable.

    If given an argument that starts with a '+', 'date' prints the
    current date and time (or the date and time specified by the '--date'
    option, see below) in the format defined by that argument, which is
    -----Info: (coreutils.info.gz)date invocation, 40 lines --Top-----
